

LAND REGISTRY OFFICES, LYTHAM ST. ANNE'S

REINFORCED BITUMEN MEMBRANE WATERPROOFING

The 2000m² roof of The Land Registry Offices in Lytham St. Anne's was in need of refurbishment. The appointed surveying practice invited four manufactures and four contractors' to complete a survey and submit their findings to the design team. Bauder's survey was the only one to reveal substantial water ingress due to a defective cavity tray. Bauder recommended the use of the Bauder Total Roof System to cope with changeable weather conditions and high levels of wind uplift that the exposed costal location offered.

The Land Registry Office at Lytham St. Anne's has one of the most modern roofing solutions available on the today's market. It has provided the client with a waterproofing solution which gives true value for money without any compromise to either to product or system.
