

# BRADING ROMAN VILLA

BAUDER TOTAL GREEN ROOF SYSTEMS WITH SEDUM BLANKET

Brading Roman Villa, Isle of Wight is a new build visitors centre where sustainable construction was a high priority together with low maintenance and running costs. Stabilising the internal temperature was essential in order to mitigate the summer high temperatures which tend to cook-up and dry the remains of the roman mosaics housed beneath, and conversely in winter to prevent the frost, both of which damage the historical relics.

The incorporation of the Bauder sedum roof provided this temperature stability, whilst providing a low maintenance eye-catching roof. Records showed that once the green roof was installed, the centre attracted more visitors than previous years.
