

# CONTINUAL PROFESSIONAL DEVELOPMENT SEMINAR

## REINFORCED BITUMEN MEMBRANE SYSTEMS

The Bauder Total Roof System has an unrivalled pedigree. This leading system has been specified now for over two decades and is universally recognised by specifiers as being the best 'high performance' bituminous system available. It is universally specified by most leading Architectural and Building Surveying practices and Local Authorities. Why?

- The performance characteristics and life expectancy of 'BTRS' are as yet unequalled by any other known system currently available in the UK market.
- We have never once received an insurance claim for system failure.
- It is the only bituminous system on the UK market that holds an AA fire rating for the whole system and not just the capping sheet layer.
- The system is installed by individually trained and approved operatives, all of whom carry I.D. badges
- The installation process is monitored by site technicians.

BTRS is a system package where all of the main system components are manufactured by Bauder and this allows us to offer a comprehensive guarantee.

We also provide a refurbishment project support service including core sample analysis, roof survey and photographic report, budget pricing, detailed specification including relevant drawings, with a condensation risk analysis where required.

Our 45 minute visual presentation covers: -

- Flat Roofing – what can go wrong 'product, design & workmanship'.
- System design and construction
- Main features and benefits
- Our services
- Question Time (allow extra 10 - 15 minutes)

Conveniently staged over the lunch time period in the comfort of your offices, our seminars are designed to be as informative as possible whilst keeping disruption to the working day to an absolute minimum.

The best thing about one of our seminars is that we are able to tailor it to suit your needs.

Should your company wish to benefit from a seminar, please register your interest with us.
