

SAINSBURY'S LOADING BAY

INTENSIVE GREEN ROOF

Sainsbury's Loading Bay in 2008

Sainsbury's Loading Bay in 1997

When the new Sainsbury's Loading Bay at Hove was first designed, the criteria dictated that the building must blend into the countryside without penetrating the scenery. The idea was to install a green roof that would mature and be allowed to grow wild over the coming years, whilst still providing a robust waterproofing build up underneath.

The Bauder Intensive Green Roof was incorporated over the loading bay was installed when the system was only a decade old within the UK, and since then the landscaping has flourished into a wild meadow, creating a natural habitat for small mammals and birds.

Today, as then, Bauder's policy still remains to invest in continual research and development to ensure their systems remain at the cutting edge of green roof technology.
