

# CONTINUAL PROFESSIONAL DEVELOPMENT SEMINAR

## SINGLE PLY SYSTEMS

Bauder's single ply roofing systems are the ultimate choice for lightweight, fast track and cost effective waterproofing. Our single ply systems suit all dimensions, sizes and shapes of flat roofs and are installed using hot air welding methods with mechanical fastenings or adhesive bonding. The systems provide solutions that are durable, cost effective, resilient to the natural elements, and give superior fire resistance. The safety conscious flame-free installation removes the need for hot works on site.

Bauder undertook the FM testing programme on its two single ply membranes, FPO & PVC, and used its ability as a manufacturer of both insulation and bituminous waterproofing sheets to combine all of the required elements of the flat roofing system from one manufacturer.

This means that **Bauder are the only manufacturer to have a complete flat roof waterproofing system approved**, rather than using component parts from different suppliers to piece together a solution.

Issues raised include:-

- Design Considerations for Single Ply Roofs
- FM Approval for a complete system – Bauder is the only manufacturer to be granted approval for a complete system build-up
- Types of Single Ply Membranes
- Principals of wind uplift
- Available component accessories
- Detailing principals
- Environmental considerations
- Sustainable Construction
- Guarantees

Conveniently staged over the lunch time period in the comfort of your offices, our seminars are designed to be as informative as possible whilst keeping disruption to the working day to an absolute minimum.

The best thing about one of our seminars is that we are able to tailor it to suit your needs.

Should your company wish to benefit from a seminar, please register your interest with us.
