

BAUDER GREENS CITY CENTRE

DUFF STREET LANE, EDINBURGH

When Bauder was approached to install a roof over the apartments at Duff Street, they did not realise what was going to be involved. However, it soon became clear that due to the barrel vault roof being overlooked, it would best benefit from a Bauder Extensive Green Roof System.

As with every green roof project, a tailor made specification was produced. Slopes in excess of 30 degree meant that the best option for the landscaping would be to install sedum blanket rolls the width of the roof span, offering a practical and ecological solution which placed the environment first. A statement further complimented by the use of the Bauder Thermoplan Single Ply membrane on the balcony's, manufactured from flexible polyolefin this represents a new generation of environmentally friendly synthetic waterproofing membranes. In turn the development at Duff Street can now boost one of the most genuine environmentally friendly systems currently available on the market today.
