

BauderTHERM Stripes

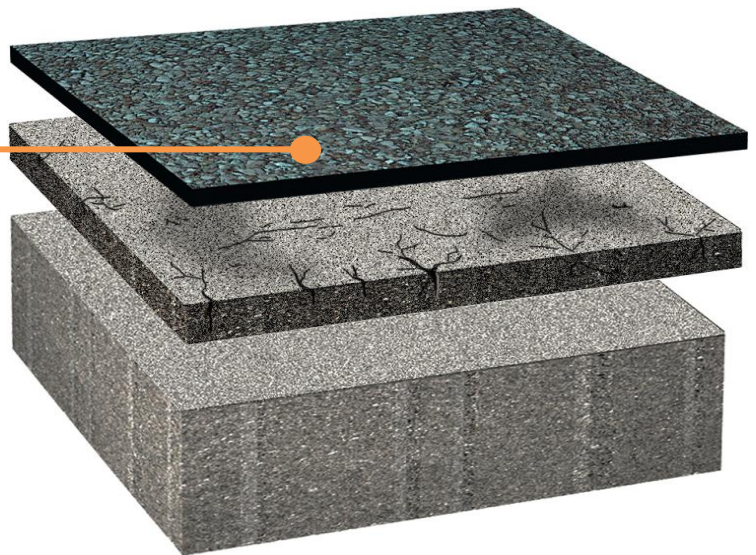

BITUMINOUS SINGLE LAYER OVERLAY SOLUTION

BauderTHERM 'Stripes' is a single-layer refurbishment system that is practical, quick and cost effective, and is designed to extend the life of existing bitumen based roof systems. The membrane incorporates thermally activated bitumen adhesive 'stripes' on the underside which, when activated with the gas torch during installation, form an immediate bond on contact with the existing waterproofing. A comprehensive range of guarantees are available for this system.

SL500 Membrane

this is a single layer, torch-bonded elastomeric bitumen overlay membrane which features a spunbond polyester reinforcement.

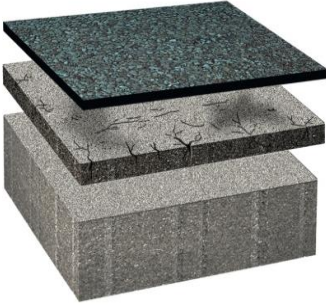

The system uses **Bauder EGV 3.5** underlayer and **Bauder K4E** capsheet at all perimeters and details to ensure robustness at these more vulnerable areas.

When to Specify

This membrane is ideal for overlaying existing built-up felt or asphalt systems where the waterproofing has reached the end of its serviceable life but is still basically sound; including those where some entrapped moisture may be present. It cannot be used in new build applications or when warm roof insulation is to be incorporated. This membrane complies with the requirements of BS EN 13707:2004.

Weight Loading

Product	Thickness (mm)	Weight (Kg/m ²)
BauderTHERM Stripes SL500	5.2	6.0
